TUSCANY

Extra Virgin Olive Oil meets Stainless Steel

Tuscany, located in Italy, is a land of excellence in agri-food products, among which stands out the production of extra virgin olive oil. Tuscan oils are typical for their spicy, bitter, or sweet notes, usually very fruity. These characteristics are attributed to the high presence of polyphenols, resulting from both early harvests (with olives at the veraison stage) and the cultivation of plants in hilly environments, the latter characterized by a good temperature range between night and day hours. Favorable environmental conditions that have allowed the development of noble and specific cultivars of this region.

This is virtuously combined with ancient wisdom that meets our solid manufacturing experience today: for four generations, producers of stainless steel kitchen utensils and, out of passion, of extra virgin olive oil.

Extra virgin olive oil finds an irreplaceable ally in stainless steel: from the patented stainless steel bottle to the oil cruets for table service that we designed to protect this precious nectar from light (which alters its chemical structure), air (which oxidizes it and degrades its nutraceutical properties), fungi, and bacteria, to the wide range of accessories: pourers, dressing sprays, dispensers, salt grinders, pepper mills, and spices. Because Olipac has always been at the forefront in the study of solutions for the preservation of precious oils and for healthy seasoning: a collection of products resulting from our culture of living that combines expertise, tradition with elegant and functional design for which Olipac has received numerous international awards over the years. An ancient world in constant evolution.

Stainless steel bottle vs. glass bottle: a comparative study

The conservation in stainless steel bottle keeps longer the quality of olive oil in terms of lower oxidation state, reduced loss in antioxidant compounds, the preservation of the sensory characteristics.

Our Heritage

The olive cultivars in Italy are specific varieties of olive trees selected to adapt to different climatic environments and terrains, and to produce high-quality oils with unique characteristics. Each cultivar has distinctive features that influence the taste, aroma, and nutritional qualities of the olive oil produced from these fruits and are often named based on the locations where they have been historically developed or cultivated, thus representing an important cultural and gastronomic heritage of Italy.

In homage to this unique heritage, we have adopted the names of these varieties for our stainless steel oil cruets and table products because, like the cultivars themselves, our products are carefully selected to offer high-quality experiences, and each Olipac product is designed to enhance and celebrate the diverse characteristics of olive oils.

Evoo Brands & Bottles

The best producers of extra virgin olive oil chose Olipac to bottle their product. Following a thorough scientific research, it has been shown as stainless steel is the best material for storage of extra virgin olive oil: important high quality EVVO mills have therefore chosen Olipac which, in turn, has submitted products to a disciplinary, to select only the best of the best.
